

OFRIEND EDUCATION

Part 1:

MVP (Minimum Viable Product)

1. Product Overview: An EduTech solution for students and institutions that combines:

- Online community for students (like Facebook, but for learning)
- Exam proctoring for secure online tests
- Plagiarism detection for academic integrity

2. Value Proposition

- A one-stop platform for learning, exams, and collaboration.
- Students get a safe learning community.
- Institutions can conduct fair and secure exams.
- Plagiarism detection ensures originality.

3. Target Audience

- Lifelong learners
- Students at different levels
- Institutions (schools, universities, training centers)

4. Core Features (MVP)

- Student and institution accounts
- Online community (basic profiles, posts, groups)
- Exam creation and scheduling
- Manual exam proctoring
- Basic plagiarism detection
- Dashboard for students, teachers, and admins

5. Future Features

- AI-powered proctoring
- Detailed plagiarism reports
- Mobile app (iOS/Android)
- LMS and payment integrations
- Gamified learning tools (badges, points, leaderboards)

6. Success Criteria

- Students engage in the online community
- Institutions run at least 2 exam sessions successfully
- Plagiarism detection is actively used
- Early users are satisfied and continue using the platform

Part 2:
PRD (Product Requirement Document)

1. Problem Statement

- Students lack a dedicated online community for learning.
- Institutions face challenges with online cheating and plagiarism.
- Existing solutions are fragmented, costly, and not student-friendly.

2. Goals & Objectives

- Build an integrated platform that combines community + exams + plagiarism check.
- Make online learning engaging and credible.
- Provide a scalable solution for schools and individuals.

3. User Personas

- Student: Wants a learning community, fair exams, plagiarism check for assignments.
- Teacher/Examiner: Needs to create exams, monitor students, and review results.
- Institution Admin: Wants analytics, reporting, and assurance of integrity.

4. User Journey (Simplified Flow)

1. Student signs up and creates profile
2. Joins groups, connects with peers
3. Teacher sets up exam → student takes exam under supervision
4. Student uploads assignment → plagiarism check runs
5. Results, reports, and engagement shown on dashboard

5. Features (Detailed Breakdown)

- Community: Profiles, groups, posts, comments
- Exams: Create, schedule, monitor (manual first)
- Plagiarism Detection: Upload and check documents
- Dashboard: Activities, results, analytics

6. Technical Scope (High-Level)

- Platform: Web app first, mobile app later
- Backend: Scalable API-based architecture
- Integrations: Third-party plagiarism API, future LMS integration
- Security: Data encryption, user authentication

7. KPIs / Success Metrics

- Number of registered students and institutions

- Number of exams completed successfully
- Percentage of plagiarism checks performed
- Engagement rate in community (posts, comments, groups)

8. Pilot / Rollout Plan

- Phase 1: Pilot with 1–2 institutions (100–200 students)
- Phase 2: Expand to multiple schools and independent learners
- Phase 3: Add advanced features and mobile app
